```
The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins AAY34584-Y35879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent office media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see
                                                                                                                                                                                                           Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis;
Sequence 1230025 BP; 367213 A; 249833 C; 249013 G; 363589 T; 377 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ANY34584-Y35879) can be used in immunogenic compositions as vaccines vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                  sequence of the complete genome of Chlamydia pneumoniae.
                                                                                                                                                                                                                             sinusitis; purulent ofitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope; ss.

Senome sequence of Chlamydia trachomatis

Claim 1; Page 373-656; 1755pp; English

The present sequence represents the complete genome of Chlamydia trachomatis. Open reading frames (ORFs) of the genome encode

9 polypeptides AAY36754-Y37949. The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perhepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases. -- 251683 Db 252200 ACTTCCTTCTTCGCAGTTATGTTCAGACACGCTGCAATGATAGCTGGGTTAGGAGAGA 252141 -----CGTGAATAAGGATTCTGGATTTTTTTGCCAAAGATGATCATACTCTTGTTAT 251634 252140 GACTGTTTTGCAATCGCACACATGTTTCTAAGGAGGTCATTCCATGCGCAAGATATCAGT 252081 251900 AGGATTGGTACAAGAA---ACTCCTTCTGGAGAAGTCTTCCCTGCTTTAGCGGAGAGTTT 251844 251633 CAATCTCCTCACTCCAACTCCACATTTTCTAAAGCTGCCTTACCCTCCCCGTATTTTATCC 251574 252080 GGGAATCTGCTTGCTCCTAGCATTAGCAACTTCTGGATGTTCAAAATCCTCCTCTAACGC 252021 252020 AACCCATCGGTCTCCAGCTACTCACAGTTGCTGTAAGCGTAAAAGATGATCCTCGCAC 251961 251960 ATTTGATCCTCGAGAGGTTCGCCTTCTTTCTGATATCAATTTGATTCATCATCTTATGA 251901 Sequence 1038602 BP; 304265 A; 214645 C; 214259 G; 305001 T; 432 other; 61 aaaattttcaaaaaaactctagtattcc---ggaaattcgtatatgcgcaagatatcagt 117 gggattagttcaagaaaataatctttcaggaaatatagagcctgctcttgcagaagacta 357 358 ctctctttcctcggacggactcacttatacttttaaactgaaatcagctttttggagtaa 417 478 agteteaggaatetatgettttgeettgaateeaattaaaaatgtaegaaagateeaaga 537 gggacacctctccatagaccattttggagtgcactctcctaatgaatctacattgttgt 597 gggaatctgtatcaccattctccttagcctctccgtagtcctccaaggctgcaaggagtc 177 tttagatccaagacaagtgcgacttctttcagaaatcagccttgtcaaaacatatctatga 297 tggcgaccccttaacagctgaagactttatagaatcttggaaacaagtagctactcaaga 477 1 acttocococtgotaaactatgotcagataatgotgotatgattgoaggtotaggggggg 60 taccottggaatccccaacctcgcatttcttaaaaacttttagctcttccagtcttttccc Length 1038602; cagteactectetaeateteggggggggagaetegetattaatataagagatgaaceeegtte 50; Score 449.6; DB 20; Length Pred. Genome sequence of Chlamydia pneumoniae 98US-0107078 97FR-0014673 Chlamydia pneumoniae WPI; 1999-357842/30 GEST) GENSET 20-NOV-1998; WO9927105-A2 04-NOV-1998; 21-NOV-1997; 03-JUN-1999 Griffais R;

98WO-IB01890

The present sequence represents the complete genome of Chlamydia preumoniae, and encodes proteins AAY34584-Y35879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions as vaccines. used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae. Claim 1; Page 291-611; 1912pp; English.

Open reading frames (ORFs) of the genome encode polypeptides AATSG74.73799. The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribosyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        paratrachoma; inclusion conjunctivitis; genital disease; perihepatitis; nongonococcal uretritis; epidymitis; cervicitis; salpingitis; bartholinitis; pneumopathy; venereal lymphogranulomatosis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vaccine; eye disease; conventional trachoma; nonendemic trachoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents the complete genome of Chlamydia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 seq_name: /SIDS5/gcgdata/geneseg/genesegn-emb1/NA1999.DAT:AAZ01425

                                                                                                                                               This clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of bar from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M Universty BAC Center University, College Station, Texas 77843-2123, USA using a HindIII

Another Vector: play217; Genomic DNA from Rhodobacter Sphaeroides was prepared and partially digested with Sau3A1. Size selected (20kb) fragments were subcloned into the BglII site of the cosmid vector play291 (Allen, L. N. and R. S. Hanson. 1985. Journal of Bacteriology. 161:955-962. The library was then ordered around chromosome II of Rhodobacter sphaeroides (Choudhary et al., 1994. Journal of Bacteriology, 176:764-7702). The cosmids were then digested with a variety of restriction enzymes (BamHI, EcoRI, BgIII, PSII, ECORY, NOII and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /clone_lib="cussous paral" / clone_lib="cussous paral" / clone_lib="cussous paral" / clone_lib="cussous paral" / lab_host="E. coli button" / site_l: coli button: site_l: coli button: site_l: middil: Rice is one of two most popular grains in the world. Half of the world population especially those inhabiting highly populated areas of the hundid tropics and subtropics. Fely on rice as their primary source of carbohydrate. Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to dacilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety. The library contains 36,884 clones with an average insert size of 128.5 Kb providing 10.9 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Two high density filters, each containing 18 4.12 clones (doubly spotted), represent the whole library for colony screening."

Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TREUS27/4 GUTat 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Barrell, Oxford University Press, 1999).

Direct Submission of BAC-end sequences from Anopheles gambiae
Unpublished (2001)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research F.H. Collins and sequenced by The Institute for Genomic Research DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M University BAC Center University, College Station, Texas 77843-2123, USA using a HindIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     318 laLeuValSerThrIlePheLeuGlyArgAlaLysThrAlaAspHisLeu 334
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            450 AAGCGAITAAGCAACTITATAAAGGTCAAGGGTTAGAGCTGAAATGITG 401

Constructed at the Institute for Genomic DNA isolated from a cloned population of
Rockville, WD. Genomic DNA isolated from a cloned population of
Trypanoscoma brucei (TRE0927/4 GUTat 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Email: nelsayed@tigr.org

Sequences were basecalled with phred and vector was masked with
crossmatch (see http://genome.washington.edu). Sequences were then
trimmed from both ends to remove low quality bases and masked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AG-ND-174G16.TR ND-TAM Anopheles gambiae genomic clone AG-ND-174G16

Collins and sequenced by The Institute for Genomic Research F.H. Collins and sequenced by The Institute for Genomic Research DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&W Universty BAC Center University, College Station, Texas 77843-2123, USA using a HindIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                :::::: 11111
